SECTION A - READING (5 MARKS)

1. Read the following passage carefully.

ECO - FRIENDLY PAPER

Handmade paper is an eco - friendly product and the demand for it is growing rapidly in the world. It is considered the best form of recycled paper. Not only does it have an elegant and exquisite surface for writing but also is very strong and indestructible. Artists find that it has an unmatched texture for drawing. It also helps in preventing water, land and air pollution. Very small quantities of chemicals are used in its preparation. Paper manufacturing has been one of the traditional industries of the world since its invention in China dates back to 105 AD. The Indians probably used the paper made from cellulosic fibres during the third century AD. Before this period the leaves of palm trees were used in India. Papyrus, a kind of paper made from a reed of the same name that grew on the banks of the River Nile, was used in Egypt. The handmade paper industry which flourished in India during the Mughal period declined with the establishment of paper mills in the 18th and 19th centuries. Inspired by Mahatma Gandhi it was revived during the freedom movement.
