Max. Marks: 25

SECTION A (READING) (5 Marks)

1. Read the passage and answer the questions that follow:

You may have heard stories about people who were shipwrecked. People have spent days drifting on the ocean in a life boat. They were probably very thirsty. But they could not drink the ocean water. Water contains different kinds and amounts of minerals. Ocean water contains a lot of mineral salt. Ocean water is salty. Salt water is harmful to drink. Much of the ocean salt comes from rocks beneath the ocean floor. Salt and other minerals in the rocks slowly mix with the water.

Fresh water is water that has little amount of salt. Nearly all the water we use is fresh water. We get this water from rivers, ponds, lakes and from underground. Most of our fresh water comes from rain or melting snow. Many people get their fresh water from lakes. Sometimes people change parts of a river into a lake by building a dam. The dam blocks the flowing water. Water collects behind the dam and is stored for many uses like irrigation, hydro electric projects etc.

- Salt water is _____ to drink.
- Water contains different amount and kinds of _____ .
- Ocean salts come from _____ .
- Name two sources of fresh water.
- How can we store water for various purposes?
